

## Statistics for the SDGs - global indicators

<b>Name of the indicator</b>	<b>11.6.2 Annual mean levels of fine particulate matter in 12 agglomerations</b>
<b>Sustainable Development Goal</b>	Goal 11. Sustainable cities and communities
<b>Target</b>	11.6 By 2030, reduce the adverse per capita environmental impact of cities, including by paying special attention to air quality and municipal and other waste management
<b>Definition</b>	Value of standardized average annual concentration of PM 10/PM 2,5 in 12 agglomerations.
<b>Unit</b>	µg/m <sup>3</sup>
<b>Available dimensions</b>	PM 10, PM 2,5
<b>Methodological explanations</b>	<b>PM 10</b> is particulate matter with a particle diameter equivalent to less than 10 µm. PM 10 limit of average annual concentration value: 40 µg/m <sup>3</sup> . <b>PM 2,5</b> is particulate matter with a particle diameter equivalent to less than 2,5 µm. PM 2,5 limit of average annual concentration value: 25 µg/m <sup>3</sup> .
<b>Data source</b>	Chief Inspectorate of Environmental Protection
<b>Data availability</b>	Annual data Since 2010.
<b>Notes</b>	"The presented indicator (11.6.2 Annual mean levels of fine particulate matter in 12 agglomerations) is a proxy indicator to the one adopted in the official list of indicators of the UN Sustainable Development Goals. The replacement of the original indicator (11.6.2 Annual mean levels of fine particulate matter (e.g. PM <sub>2.5</sub> and PM <sub>10</sub> ) in cities (population weighted)) is due to the inability to obtain data for it. The proxy indicator has been selected so as to most fully reflect the essence of the observed phenomenon."
