

Statistics for the SDGs - indicators for national priorities

Name of the indicator	1.4.a Number of dwellings per 1 thous. population
Sustainable Development Goal	Goal 1. No poverty
Priority	Improvement of housing situation
Definition	Number of dwellings per 1,000 population.
Unit	[-]
Available dimensions	total
Methodological explanations	<p>According to the definition, a dwelling is a premises comprising one or several rooms including auxiliary spaces, built or remodeled for residential purposes; structurally separated (by permanent walls) within a building, into which a separate access leads from a staircase, a passageway, a common hall or directly from the street, a courtyard or a garden.</p> <p>The indicator shows dwelling stocks of a selected territorial unit. Low indicator values indicate a shortage of dwellings, which could result in social problems, such as problems with the emancipation of young people. High indicator values indicate an oversupply of dwellings, the result of which may be economic difficulties, such as the difficulty of maintaining unused resources. The value of the indicator is also affected by cultural and demographic factors, such as the average number of children per family, the average age and cultural habits of the extended families living together.</p> <p>The data concerning the number of dwellings are derived from censuses and reports on dwelling stocks, on the costs and revenues of maintaining dwelling stocks, on rates of charges in buildings with dwellings, as well as from reports on housing and communal economy of the community.</p>
Data source	Statistics Poland
Data availability	Annual data; since 2010
Notes	The number of population for the years 2003-2010 is based on the National Census of Population and Housing 2002, and since 2011, it has been based on the Population and Housing Census 2011.
