

Statistics for the SDGs - indicators for national priorities

Name of the indicator	13.2.a Renewable energy share in the gross final energy consumption
Sustainable Development Goal	Goal 13. Climate action
Priority	Introduction of innovative technologies for exploiting available sources of energy, including development of geothermy
Definition	Ratio of gross final energy consumption from renewable sources to gross final energy consumption from all sources.
Unit	percent [%]
Available dimentions	total
Methodological explanations	<p>Energy from renewable sources is the energy derived from natural, repetitive environmental processes, obtained from renewable non-fossil energy sources (energy: water, wind, solar heat, geothermal heat, waves, sea currents and tides and energy obtained from biomass, biogas, biofuels).</p> <p>Gross energy consumption is a final consumption of energy carriers by the consumers (industry, transport sector, service sector, households, agriculture, forestry and fishery sector) including electricity and heat consumption by industry for electricity and heat generation as well as transformation and distribution losses.</p>
Data source	Statistics Poland
Data availability	Annual data; since 2010
Notes
