

Statistics for the SDGs - global indicators

Target 11.a Support positive economic, social and environmental links between urban, periurban and rural areas by strengthening national and regional development planning The percentage of the population of gminas that have valid local spatial development plans (regardless of the number of plans) or valid study of local spatial planning directions and determinants in total population, and by type of gminas: rural, urban and urban-rural. Unit Percent [%] Available dimensions Study of local spatial planning directions and determinants is adopted by the gmina council to determine the spatial policy, including local zoning rules, taking into account, among others, principles set out in the concept of spatial development of the country, the development strategy content and the voivodship spatial development plan, the framework study of local spatial planning of metropolitan organisation and gmina development strategies, and analysis of economic, environmental and social, demographic forecasts. The local spatial development plan is an act of local law adopted by the gmina council in accordance with the content of the study of ocal spatial planning, which specifies the purpose and the ways of developing particular areas, including public purpose investment. Data source Ministry of Infrastructure / Statistics Poland Annual data Since 2010. The presented indicator (11.a.1 Proportion of population living in gminas that have valid local spatial planning directions and determinants, by type of gminas) is a proxy indicator to the one adopted in the official list of indicators of the UN Sustainable Development Goals. The replacement of the original indicator (11.a.1 Alvamber of countries that have national urban plicies or regional development plans that (a) respond to population dynamics; (b) ensure balanced territorial development; and (c) increase local fiscal space) is due to the inability to obtain data for it. The proxy indicator has been selected so as to most fully reflect the essence of the observed phenom	Name of the indicator	11.a.1 Proportion of population living in gminas that have valid local spatial development plans or valid study of local spatial planning directions and determinants, by type of gminas
urban and rural areas by strengthening national and regional development planning The percentage of the population of gminas that have valid local spatial development plans (regardless of the number of plans) or valid study of local spatial planning directions and determinants in total population, and by type of gminas: rural, urban and urban-rural. Unit Percent [%] Study of local spatial planning directions and determinants is adopted by the gmina council to determine the spatial policy, including local zoning rules, taking into account, among others, principles set out in the concept of spatial development of the country, the development strategy content and the voivodship spatial development plan, the framework study of local spatial planning of metropolitian organisation and gmina development strategies, and analysis of economic, environmental and social, demographic forecasts. The local spatial development plan is an act of local law adopted by the gmina council in accordance with the content of the study of ocal spatial planning, which specifies the purpose and the ways of developing particular areas, including public purpose investment.
