

Statistics for the SDGs - indicators for national priorities

| Priority Building a sustainable publicly accessible, safe and affordable transport system, especially through the development and prioritization of public transport Number of pedestrians and cyclists killed or seriously injured in a road accident in a built up area per year, per 100 thous, total population. Unit persons Available dimentions A road traffic accident is an event connected with the movement of vehicles on public roads as a result of which death or injury of person occurred. A road traffic accident fatality is understood as a person who died (as a result of injuries incurred) at the scene of the accident or within the course of 30 days. A seriously injured person is a person who has suffered a loss of health in the form of: a) loss of sight, hearing, speech, fertility, other severe disability, severe incurable disease or long-term disease that is life-threatening, permanent mental illness, total or significant inability to work in the profession, in a permanent significant disfigurement or distortion of the body; b) other injuries causing bodily harm or health disruption lasting longer than 7 days. To the built-up and urbanized area (based on geodesic area of the country according to the directions of use) belong the following areas: - residential, - industrial, - other built-up, - urban undeveloped, - recreation and leisure, - transport (road, rail and others), - fossil land. Data source National Police Headquarters Data availability Annual data; since 2015 Notes Data updated on 03-04-2023 | Name of the indicator | 11.4.b Number of pedestrians and cyclists killed or seriously injured in road traffic accidents in a built-up area per 100 thous. population |
